### Dangerous Goods

The carriage of dangerous goods is governed by the Land Transport Rule: Dangerous Goods 2005. This provides that items designated Small Packages can be carried by courier companies. This rule is abbreviated to DGLQ (dangerous goods in limited quantities).

Coural has restricted itself to Small Packages of dangerous goods that may be transported as provided by the Rule, Clause 2.4, as follows:

- no dangerous goods documentation required (although the packages should be marked to identify the nature of their contents)
- no placards on the vehicle required
- no dangerous goods endorsement on driver licences required
- goods do not require segregation during transport
- the allowable total weight limit is 50kg.

The following table sets out guidelines for acceptable volume and weight limits for individual containers of the various classes of dangerous goods. Note that in this table the Packing Groups are defined as follows:

- I = high danger
- II = medium danger
- III = low danger

Note that for clarification on any matter relating to dangerous goods, reference should be made to the Land Transport Rule: Dangerous Goods 2005 (available from LTSA website). Schedule 2A of the Rule specifies a range of dangerous goods that must not be transported under the Small Packages provision. Note that for clarification on any matter relating to dangerous goods, reference should be made to the Land Transport Rule: Dangerous Goods 2005 (available from the LTSA website).

The following table sets out guidelines for acceptable volume and weight limits for individual containers of the various classes of dangerous goods (However note that Schedule 2A of the Rule specifies a range of dangerous goods that must not be transported under the Small Packages provision and substances classified as severe marine pollutants have a 500 ml/gram limit):

Mixed Loads: The maximum quantity for a mixed load is an aggregate amount of 50 using the following units: **kilograms** (solids, powders, etc. including the weight of the packaging), **litres** (liquids), **litres water capacity** (gases). The maximum quantity for a mixed load is exceeded if the quantity for any class or division in the load exceeds the limit specified for that class or division.
